

# E4S: Extreme-scale Scientific Software Stack

Scalable Tools Workshop

10:30am – 11:00am PDT,  
Granlibakken Resort, Lake Tahoe, CA

Sameer Shende  
Research Professor and Director,  
Performance Research Laboratory, OACISS, University of Oregon  
President and Director, ParaTools, Inc.

UNIVERSITY  
OF OREGON

[https://e4s.io/talks/E4S\\_Scalable\\_Tools23.pdf](https://e4s.io/talks/E4S_Scalable_Tools23.pdf)

# Challenges

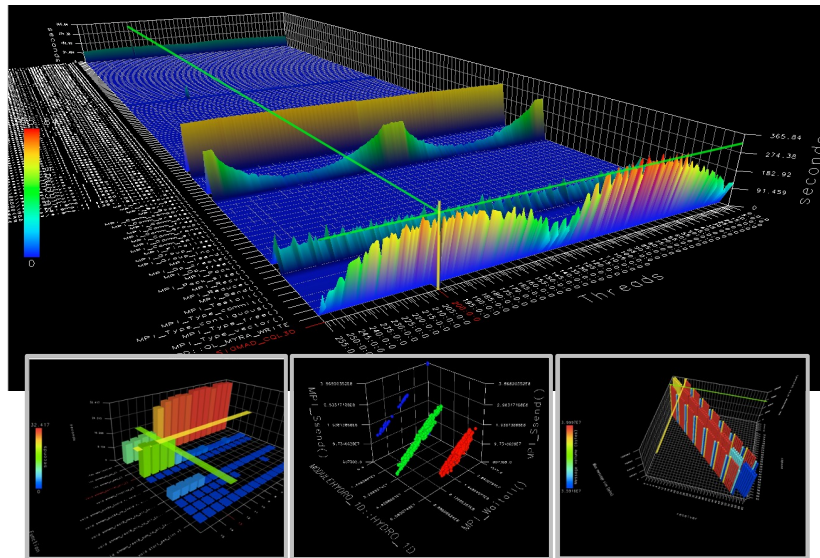

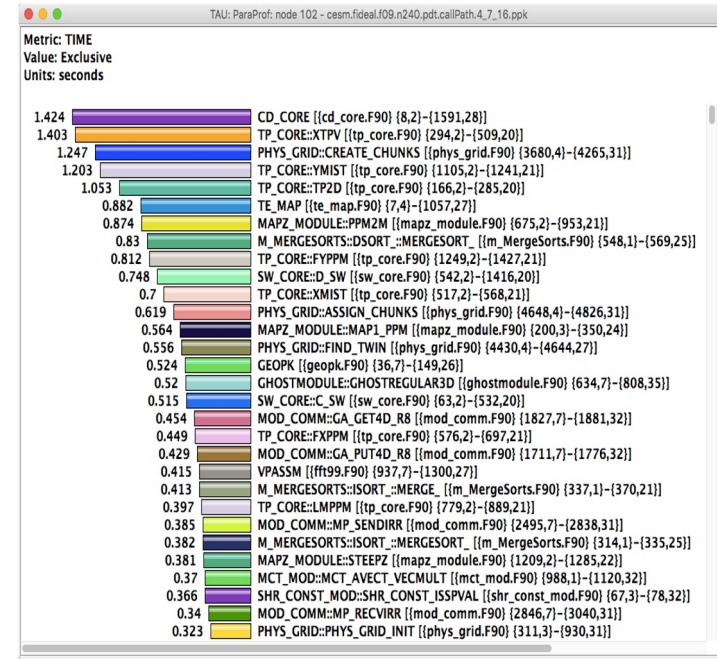

- As our software gets more complex, it is getting harder to measure the performance of, and install tools and libraries correctly in an integrated and interoperable software stack!
- Can E4S provide a stable platform for tool development?
- What are we missing?

# TAU Performance System®

Portable profiling and tracing toolkit for performance analysis of HPC parallel programs

- Supports most parallel execution models
- Provides instrumentation and measurement
- Parallel profiling analysis and data mining
- Open source: <http://tau.uoregon.edu>

TAU runs on most HPC platforms

# Our performance evaluation tools are getting complex to install!

- GPU Runtimes: ROCm, CUDA, oneAPI
- Tool interfaces: ROCprofiler V1/ROctracer V2/Rocprofiler v2, CUPTI, Level Zero, OpenCL, OMPT, Kokkos, Caliper, CAMTimers, PerfStubs, ...
- Tool dependencies:
  - Binutils, libunwind, libdwarf installed just right (-fPIC used to compile .o files that are used in DSOs)
  - GPU runtimes
  - Qt5, Java, Python, perl, bash, sed, awk, cmake...
  - PAPI
  - Compilers: LLVM, GNU, Intel, AMD, NVHPC, PrgEnv-{cray,amd,nvidia,intel,gnu-amd} on HPE CPE
  - MPI
  - Intel TBB
  - Boost
  - Other third-party libraries...
- Installing these tools and their dependencies by hand is hard!

Openfoam

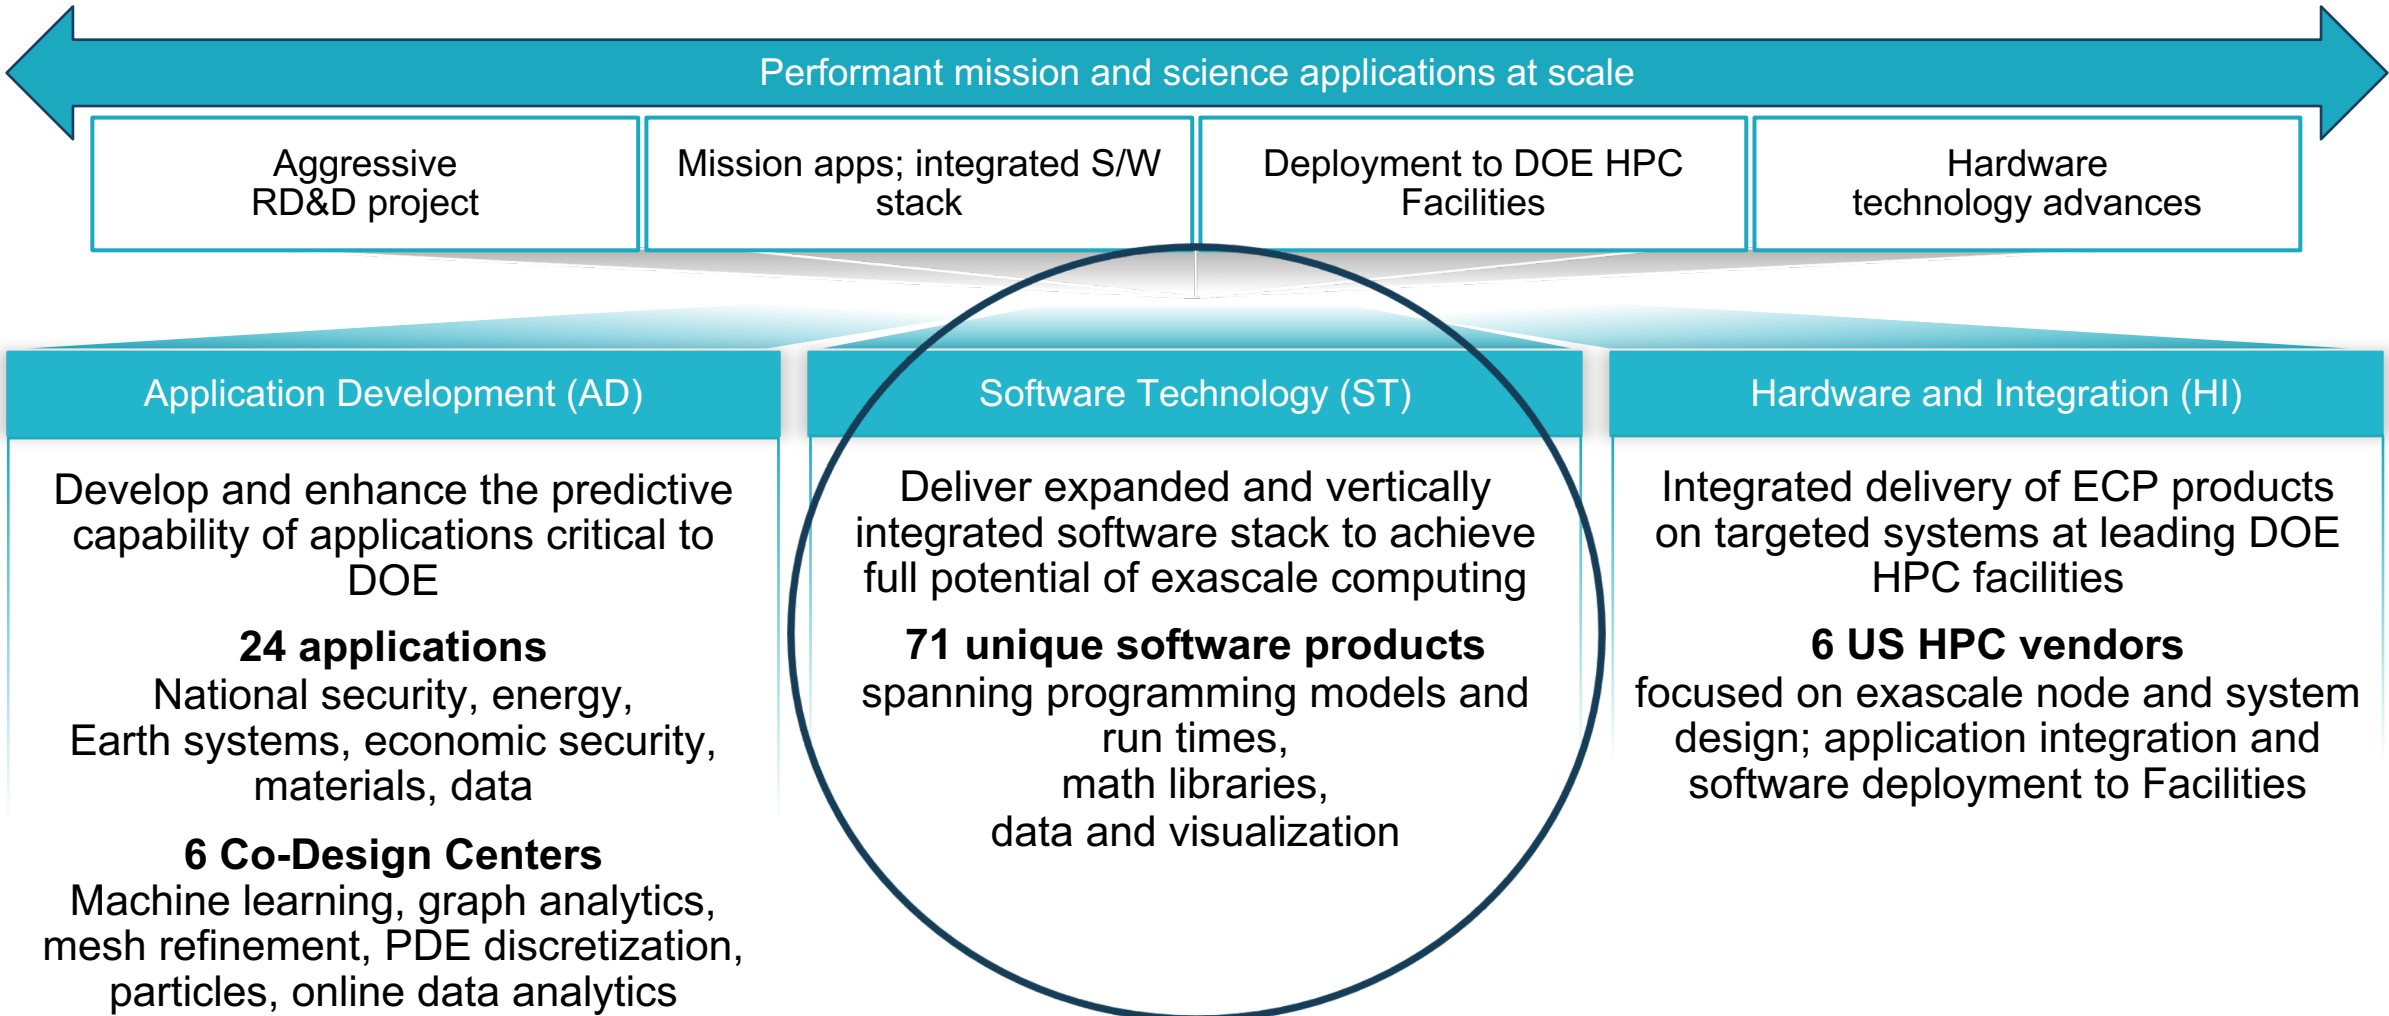

# How can we build a software stack to help tool developers?

- Tool dependencies should be pre-installed
- A consistent environment that we can share with other tool developers to report bugs
- Can containers help here?
- Build your tools with the dependencies inside a container
  - Same kernel as the host OS
  - Can support a different OS
  - Docker/podman and Singularity/Apptainer are popular container runtimes
- Need a base container that can provide the dependencies
- E4S provides a rich set of containers with tools and libraries

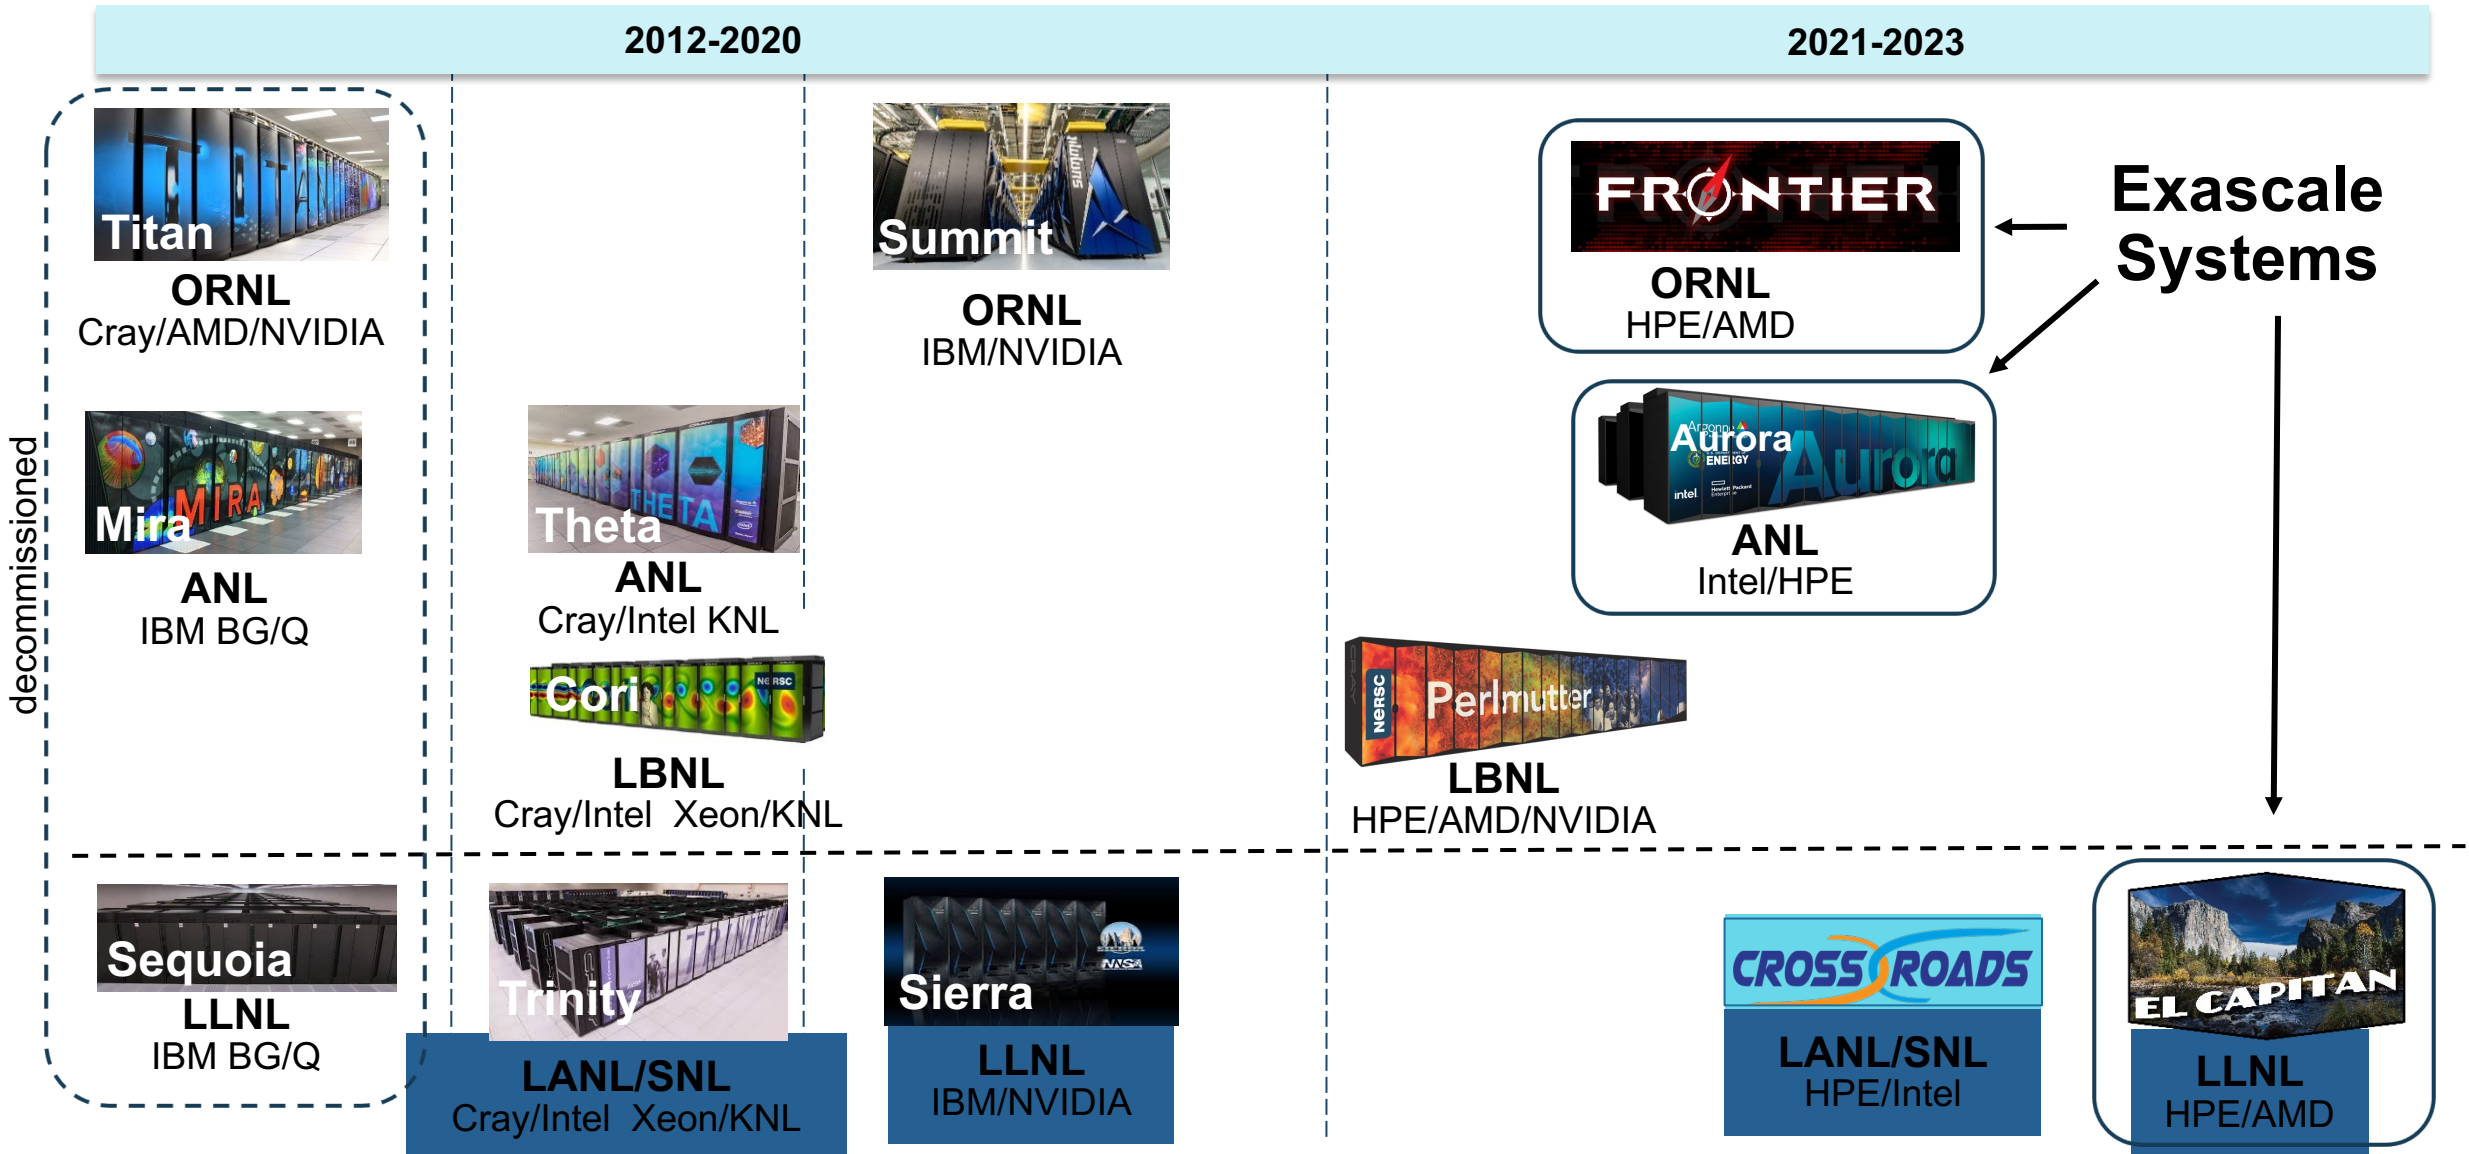

# Extreme-scale Scientific Software Stack (E4S)

# ECP's holistic approach uses co-design and integration to achieve exascale computing

# US DOE HPC Roadmap to Exascale Systems

# ECP Software Technology (ST)

## Goal

Build a comprehensive, coherent software stack that enables application developers to productively develop highly parallel applications that effectively target diverse exascale architectures

Prepare SW stack for scalability with massive on-node parallelism

Extend existing capabilities when possible, develop new when not

Guide, and complement, and integrate with vendor efforts

Develop and deliver high-quality and robust software products

# Extreme-scale Scientific Software Stack (E4S)

- E4S: HPC Software Ecosystem – a curated software portfolio
- A **Spack-based** distribution of software tested for interoperability and portability to multiple architectures with support for GPUs from NVIDIA, AMD, and Intel in each release
- Available from **source, containers, cloud, binary caches**
- Leverages and enhances SDK interoperability thrust
- Not a commercial product – an open resource for all
- Oct 2018: E4S 0.1 - 24 full, 24 partial release products
- Jan 2019: E4S 0.2 - 37 full, 10 partial release products
- Nov 2019: E4S 1.0 - 50 full, 5 partial release products
- Feb 2020: E4S 1.1 - 61 full release products
- Nov 2020: E4S 1.2 (aka, 20.10) - 67 full release products
- Feb 2021: E4S 21.02 - 67 full release, 4 partial release
- May 2021: E4S 21.05 - 76 full release products
- Aug 2021: E4S 21.08 - 88 full release products
- Nov 2021: E4S 21.11 - 91 full release products
- Feb 2022: E4S 22.02 – 100 full release products
- May 2022: E4S 22.05 – 101 full release products
- August 2022: E4S 22.08 – 102 full release products
- November 2022: E4S 22.11 – 103 full release products
- February 2023: E4S 23.02 – 106 full release products
- May 2023: E4S 23.05 – 109 full release products

<https://e4s.io>

Also include other products .e.g.,  
AI: PyTorch, TensorFlow (CUDA, ROCm)  
Co-Design: AMReX, Cabana, MFEM  
EDA: Xyce

# E4S: Extreme-scale Scientific Software Stack

- E4S is a community effort to provide open-source software packages for developing, deploying and running scientific applications on HPC platforms.
- E4S has built a comprehensive, coherent software stack that enables application developers to productively develop highly parallel applications that effectively target diverse exascale architectures.
- E4S provides a curated, Spack based software distribution of 100+ HPC, EDA (e.g., Xyce), and AI/ML packages (e.g., TensorFlow, PyTorch).
- With E4S Spack binary build caches, E4S supports both bare-metal and containerized deployment for GPU based platforms.
  - X86\_64, ppc64le (IBM Power 9), aarch64 (ARM64) with support for GPUs from NVIDIA, AMD, and Intel
  - HPC and AI/ML packages are optimized for GPUs and CPUs.
- Container images on DockerHub and E4S website of pre-built binaries of ECP ST products.
- Base images and full featured containers (with GPU support).
- Commercial support for E4S through ParaTools, Inc. for installation, maintaining an issue tracker, and ECP AD engagement.
  - <https://dashboard.e4s.io> [https://e4s.io/talks/E4S\\_Support\\_May23.pdf](https://e4s.io/talks/E4S_Support_May23.pdf)
- e4s-cl container launch tool allows binary distribution of applications by substituting MPI in the containerized app with the system MPI. e4s-alc is a tool to create custom container images from base images
- Quarterly releases: E4S 23.05 released on May 31, 2023: [https://e4s.io/talks/E4S\\_23.05.pdf](https://e4s.io/talks/E4S_23.05.pdf)
- E4S for commercial cloud platforms: AWS image supports MPI implementations and containers with remote desktop (DCV).
  - Intel MPI, NVHPC, MVAPICH2, MPICH, MPC, OpenMPI

# e4s-cl: A tool to simplify the launch of MPI jobs in E4S containers

- E4S containers support replacement of MPI libraries using MPICH ABI compatibility layer and Wi4MPI [CEA] for OpenMPI replacement.
- Applications binaries built using E4S can be launched with Singularity using MPI library substitution for efficient inter-node communications.
- e4s-cl is a new tool that simplifies the launch and MPI replacement.
  - e4s-cl init --backend [singularity|shifter|docker] --image <file> --source <startup\_cmds.sh>
  - e4s-cl mpirun -np <N> <command>

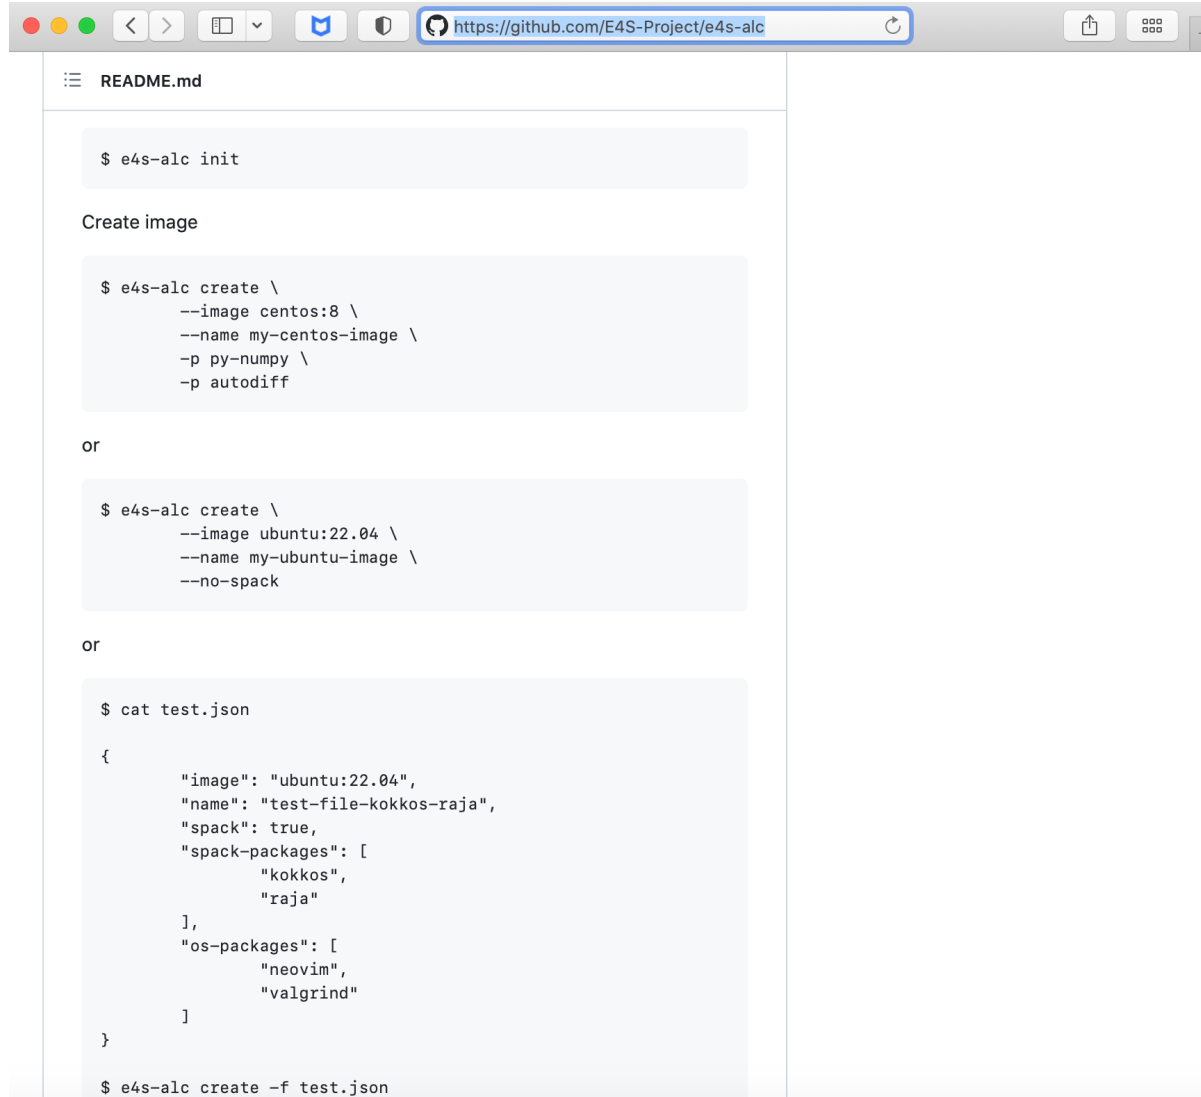

- Usage:

```
e4s-cl init --backend singularity --image ~/images/e4s-gpu-x86.sif --source ~/source.sh
cat ~/source.sh
  . /spack/share/spack/setup-env.sh
  spack load trilinos+cuda cuda_arch=80
e4s-cl mpirun -np 4 ./a.out
```

# e4s-alc: E4S à la carte – a tool to customize container images

```
README.md

$ e4s-alc init

Create image

$ e4s-alc create \
  --image centos:8 \
  --name my-centos-image \
  -p py-numpy \
  -p autodiff

or

$ e4s-alc create \
  --image ubuntu:22.04 \
  --name my-ubuntu-image \
  --no-spack

or

$ cat test.json

{
  "image": "ubuntu:22.04",
  "name": "test-file-kokkos-rajana",
  "spack": true,
  "spack-packages": [
    "kokkos",
    "rajana"
  ],
  "os-packages": [
    "neovim",
    "valgrind"
  ]
}

$ e4s-alc create -f test.json
```

Add packages to a container image:

- Spack packages
- OS packages (yum/apt/zypper)
- Add a tarball to a location
- Create a new container image
- Works with Docker/podman & Singularity/Apptainer!

<https://github.com/E4S-Project/e4s-alc>

# Spack

- E4S uses the Spack package manager for software delivery
- Spack provides the ability to specify versions of software packages that are and are not interoperable.
- Spack is a build layer for not only E4S software, but also a large collection of software tools and libraries outside of ECP ST.
- Spack supports achieving and maintaining interoperability between ST software packages.
- <https://spack.io>

# Spack is a flexible package manager for HPC

- How to install Spack (works out of the box):

```
$ git clone https://github.com/spack/spack  
$ . spack/share/spack/setup-env.sh
```

- How to install a package:

```
$ spack install tau
```

- TAU and its dependencies are installed within the Spack directory.
- Unlike typical package managers, Spack can also install many variants of the same build.
  - Different compilers
  - Different MPI implementations
  - Different build options

Visit [spack.io](https://spack.io)

 [github.com/spack/spack](https://github.com/spack/spack)

 [@spackpm](https://twitter.com/spackpm)

# Spack provides the *spec* syntax to describe custom configurations

```
$ git clone https://github.com/spack/spack
$ . spack/share/spack/setup-env.sh
$ spack compiler find # set up compilers
$ spack external find # set up external packages
```

```
$ spack install tau unconstrained
$ spack install tau@2.32 @ custom version
$ spack install tau@2.32 %gcc@9.3.0 % custom compiler
$ spack install tau@2.32 %gcc@9.3.0 +rocm +/- build option
$ spack install tau@2.32 %gcc@9.3.0 +mpi ^mvapich2@2.3~wrapperrpath ^ dependency information
```

- Each expression is a **spec** for a particular configuration
  - Each clause adds a constraint to the spec
  - Constraints are optional – specify only what you need.
  - Customize install on the command line!
- Spec syntax is recursive
  - Full control over the combinatorial build space

# The Spack community is growing rapidly

- **Spack simplifies HPC software for:**
  - Users
  - Developers
  - Cluster installations
  - The largest HPC facilities
- **Spack is central to ECP's software strategy**
  - Enable software reuse for developers and users
  - Allow the facilities to consume the entire ECP stack
- **The roadmap is packed with new features:**
  - Building the ECP software distribution
  - Better workflows for building containers
  - Stacks for facilities
  - Chains for rapid dev workflow
  - Optimized binaries
  - Better dependency resolution

# E4S Download from https://e4s.io

The screenshot shows the E4S website homepage. The browser address bar displays "https://e4s.io". The navigation menu includes: HOME, EVENTS, ABOUT, E4S-CL, PRODUCT DOCPORTAL, DEPLOYMENTS, COMMUNITY POLICIES, CONTACT, JOIN, FAQ, DOCUMENTATION, and a prominent orange DOWNLOAD button. The main heading reads "E4S Project" followed by "The Extreme-scale Scientific Software Stack". A central announcement states: "E4S 23.05 container images now available! See [Downloads](#) for more information on E4S 23.05." Below this is a section titled "What is E4S?" with a dashed line above and below the title. The text describes E4S as a community effort to provide open source software packages for developing, deploying and running scientific applications on high-performance computing (HPC) platforms. It mentions that E4S provides from-source builds and containers of a [broad collection of HPC software packages](#).

# E4S Container Download from <https://e4s.io>

The screenshot shows a web browser window with the address bar displaying <https://e4s-project.github.io/download.html>. The website has a green and black header with the E4S logo and a navigation menu. The main content area features the title "Acquiring E4S Containers" and a paragraph of text. The navigation menu includes: HOME, EVENTS, ABOUT, E4S-CL, PRODUCT DOCPORTAL, DEPLOYMENTS, COMMUNITY POLICIES, CONTACT, JOIN, FAQ, DOCUMENTATION, and a prominent orange "DOWNLOAD" button.

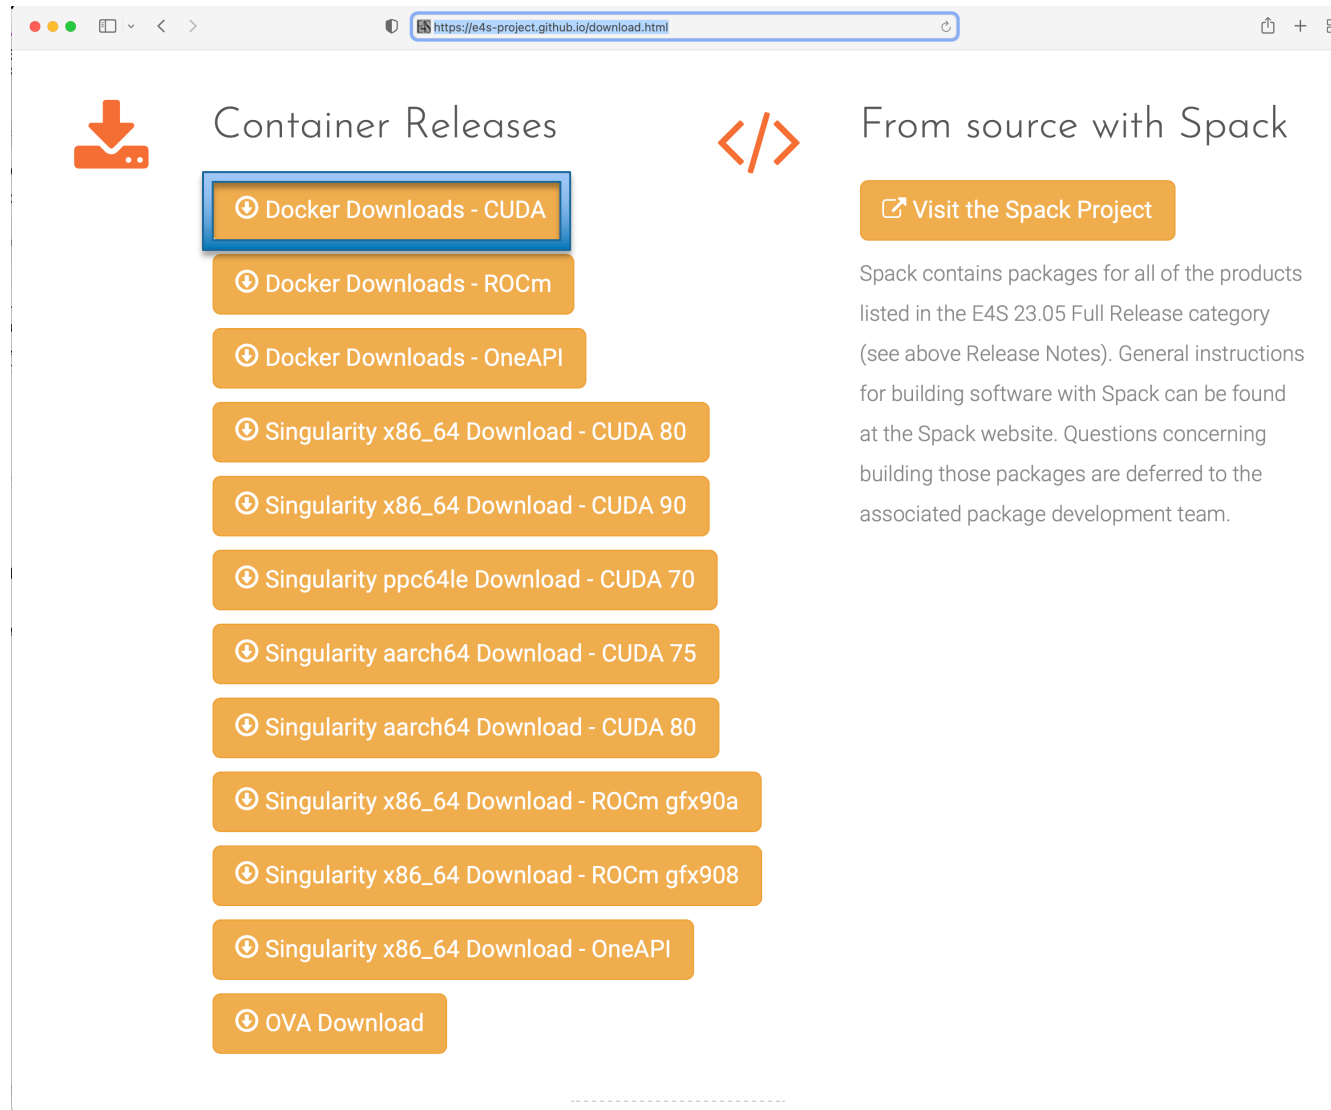

## Acquiring E4S Containers

The current E4S container offerings include Docker and Singularity images capable of running on X86\_64, PPC64LE, and AARCH64 architectures. Our full E4S Release images are based on Ubuntu 20.04 (x86\_64, aarch64, ppc64le). In addition to offering a full E4S image containing a comprehensive selection of E4S software released on a quarterly cycle, we also offer a set of minimal base images suitable for use in Continuous Integration (CI) pipelines where Spack is used to build packages.

Docker images are available on the [E4S Docker Hub](#).

Please see the [E4S 23.05 Release Notes](#).

From source with Spack

[Visit the Spack Project](#)

Spack contains packages for all of the products listed in the E4S 23.05 Full Release category (see above Release Notes). General instructions for building software with Spack can be found at the Spack website. Questions concerning building those packages are deferred to the associated package development team.

- Separate full featured Singularity images for 3 GPU architectures
- GPU full featured images for
  - x86\_64 (Intel, AMD, NVIDIA)
  - ppc64le (NVIDIA)
  - aarch64 (NVIDIA)
- Full featured images available on Dockerhub
- 100+ products on 3 architectures

# Download E4S 23.05 GPU Container Images: AMD, Intel, and NVIDIA

Note on Container Images

Container images contain binary versions of the Full Release packages listed above. Full-featured GPU-enabled container images are available from Dockerhub:

```
# docker pull ecpe4s/e4s-cuda:23.05
```

```
# docker pull ecpe4s/e4s-rocm:23.05
```

```
# docker pull ecpe4s/e4s-oneapi:23.05
```

### E4S Full GPU Images

These images contain a full Spack-based deployment of E4S, including GPU-enabled packages for NVIDIA, AMD, or Intel GPUs.

These images also contain TensorFlow, PyTorch, and TAU.

# Intel Compilers and MPI Libraries Now Accessible in E4S Containers: A Breakthrough Collaboration Driving Productivity and Sustainability

- Background:
  - E4S provides a unified software stack of libraries and tools for portable performance on HPC systems, especially GPU-based systems.
  - E4S promises seamless portability for onsite and cloud-based workflows through its container-based approach.
  - Intel compilers and libraries available in E4S accelerates preparations for Aurora and future Intel-based GPU systems.
  - E4S eliminates the need for separate management of access to Intel compilers and libraries, benefiting users
  - Many important workflows, especially regression testing and turnkey usage for Intel platforms become feasible and easier
- The E4S-Intel agreement makes Intel compilers and MPI libraries available via E4S containers:
  - Enables full testing and execution of HPC libraries and tools on Intel platforms via E4S, including Aurora early access systems
  - Represents a win-win for DOE, Intel, and the broader E4S user community that is developing at other US agencies and industry
- The Intel agreement brings Intel in line with E4S builds that include AMD and NVIDIA tools.
- The E4S-Intel agreement is possible through the partnership of ECP and the E4S commercial provider, ParaTools, Inc.

# E4S base container images allow users to customize their containers

GPU Base Images

These images come with MPICH, CMake, and the relevant GPU SDK – either AMD ROCm, NVIDIA CUDA Toolkit and NVHPC, or Intel OneAPI.

AMD ROCM (X86_64)	NVIDIA Multi-Arch (X86_64, PPC64LE, AARCH64)	Intel OneAPI (X86_64)
ecpe4s/e4s-base-rocm:23.05	ecpe4s/e4s-base-cuda:23.05	ecpe4s/e4s-base-oneapi:23.05

	e4s-base-cuda-aarch64-23.05.sif	
	e4s-base-cuda-ppc64le-23.05.sif	

Minimal Spack

This image contains a minimal setup for using Spack 0.18.0 w/ GNU compilers

X86_64, PPC64LE, AARCH64
ecpe4s/ubuntu20.04
ecpe4s-ubuntu20.04-x86_64-23.05.sif
ecpe4s-ubuntu20.04-ppc64le-23.05.sif
ecpe4s-ubuntu20.04-aarch64-23.05.sif

- Intel oneAPI
- AMD ROCm
- NVIDIA NVHPC and CUDA

# e4s-alc: a new tool to customize container images

The screenshot displays the GitHub repository page for `E4S-Project/e4s-alc`. The repository is public and has 6 branches and 0 tags. The main branch is `main`. The repository contains the following files:

File	Commit Message	Time
<code>e4s_alc</code>	Merge branch 'main' into development	last month
<code>tests</code>	commented why a test is commented out	2 months ago
<code>.gitignore</code>	Added Makefile to download python interpreter	last month
<code>LICENSE</code>	Initial commit	3 months ago
<code>Makefile</code>	Added Makefile to download python interpreter	last month
<code>README.md</code>	updated README to show singularity support with svg to main	last week
<code>pyproject.toml</code>	Slight correction of the description of alc in pyproject + update...	last month
<code>tox.ini</code>	barebones tox testing implemented	2 months ago

The `README.md` file contains the following information:

**Operating Systems supported:**

- Ubuntu ✓
- Red Hat ✓
- SUSE ✓

**Backends supported:**

- Docker ✓
- Podman ✓
- Singularity ✓

The right sidebar shows repository statistics: 1 fork, 2 stars, MIT license, 2 stars, 4 watching, 1 fork, and 4 contributors: FrederickDeny, PlatinumCD Cameron Durbin, spoutn1k Jean-Baptiste Skutnik, and sameershende Sameer Shende.

Add to a base image:

- Spack packages
- OS packages
- Tarballs

# E4S 23.05 DOE LLVM and CI images

<https://e4s-project.github.io/download.html>

## DOE LLVM E4S Image

This multi-architecture image contains E4S products compiled with DOE LLVM 16 and Flang using Spack

**Multi-Arch (X86\_64, PPC64LE, AARCH64)**

- [ecpe4s/e4s-doe-llvm:23.05](#) docker
- [e4s-doe-llvm-x86\\_64-23.05.sif](#) mirror 1
- [e4s-doe-llvm-aarch64-23.05.sif](#) mirror 1
- [e4s-doe-llvm-ppc64le-23.05.sif](#) mirror 1

## Continuous Integration Images

These are barebones operating system images which contain only essential build tools and python packages needed by Spack.

These images are intended to be used in continuous integration workflows where Spack is first cloned and then used to build and test software.

## Extreme-scale Scientific Software Stack (E4S) version 23.05

Exascale Computing Project (ECP) Software Technologies (ST) software, Extreme-scale Scientific Software Stack (E4S) v23.05, includes a subset of ECP ST software products, and demonstrates the target approach for future delivery of the full ECP ST software stack. Also available are a number of ECP ST software products that support a Spack package, but are not yet fully interoperable. As the primary purpose of the v23.05 is demonstrating the ST software stack release approach, not all ECP ST software products were targeted for this release. Software products were targeted primarily based on existing Spack package maturity, location within the scientific software stack, and ECP SDK developer experience with the software. Each release will include additional software products, with the ultimate goal of including all ECP ST software products.

# Minimal Spack base image on Dockerhub

The screenshot shows the Docker Hub interface for the repository `ecpe4s/ubuntu18.04-spack`. The repository is categorized as a 'Container' and was updated a month ago. It has over 1 million pulls, as indicated by the 'Pulls 1M+' badge. The 'Tags' section is active, showing two tags: `latest` and `0.17.1`. Both tags were pushed a month ago by user `esw123`. The `latest` tag has a digest of `95fb8df7019b` for the `linux/amd64` architecture and `47903be536c0` for `linux/ppc64le`. The `0.17.1` tag has the same digests. The compressed sizes are 382 MB for `linux/amd64` and 371.9 MB for `linux/ppc64le`. A 'Manage Repository' button is visible in the top right, and a 'View preview' link is in the 'Advanced Image Management' section.

```

## Languages:

- Julia with support for MPI, and CUDA
- Python

## AI products with GPU support

- Tensorflow
- Pytorch

## EDA Tools:

- Xyce

## 3D Visualization

- Paraview
- VisIt
- TAU's paraprof ...

E4S 23.05 adds support for NVIDIA A100 (sm80), V100 (sm70), and H100 (sm90) GPUs

# E4S Support for AI/ML frameworks with V100, A100, and H100 GPUs

```
Singularity> python
Python 3.8.10 (default, Nov 14 2022, 12:59:47)
[GCC 9.4.0] on linux
Type "help", "copyright", "credits" or "license" for more information.
>>> import numpy
>>> import scipy
>>> import matplotlib
>>> import tensorflow
>>> tensorflow.__version__
'2.12.0'
>>> import torch
>>> torch.__version__
'2.0.0'
>>> torch.cuda.get_device_name(torch.cuda.current_device())
'NVIDIA H100 PCIe'
>>> █
```

E4S 23.05 supports NVIDIA H100 GPUs with TensorFlow 2.12.0 and PyTorch 2.0.0

# E4S 23.05 container with ROCm: Top level specs

```

# E4S 23.02 AWS image: US-West2 (OR)

The screenshot displays a desktop environment with the following components:

- ParaView 5.9.0:** A 3D visualization of a pressure field on a mesh. The color scale ranges from  $0.0e+00$  (blue) to  $1.2e-38$  (red).
- Terminal Window:** Shows the output of the `singularity run` command, listing installed modules such as `adiak/0.2.1-4vc`, `amrex/21.11-rocml-6cm`, and `parmetis/4.0.3-vhi`.
- TAU Performance Statistics:** A table showing performance metrics for node 0. The table is as follows:
 

Name	Exclusive TIME	Inclusive TIME
.TAU application	8.784	218.852
Belos: Operation Op*x	0.629	0.706
Belos: PseudoBlockGmresSolMgr total solve time	0.615	65.591
Belos: ICGS[2]: Orthogonalization	0.22	18.854
Belos: Operation Op*x	1.672	2.32
Belos: Operation Prec*x	7.617	43.327

# E4S for Commercial Cloud Platforms for EDA on AWS

- E4S: HPC Software Ecosystem – a curated software portfolio for Electronic Design Automation

The screenshot displays a Linux desktop environment with several windows open:

- Xschem - top.sch**: A schematic editor window showing a circuit diagram with components like PERP, VPP, CAP, RERAM, ES, VARACTORS, MIM, PFET, NFET, RES, DIODE, PNP, and NPN. It includes a 'Layers' menu and various simulation options.
- KLayout 0.28.5**: A layout editor window showing a 3D rendering of a golden sphere with a large black letter 'K' on its surface.
- Terminal**: A terminal window showing the installation and configuration of EDA tools. The commands and output are as follows:
 

```
[tutorial@ip-172-31-43-167 eda]$ module load eda

# Can E4S help provide a stable platform for tool development?

- Bare-metal installation as well as containers built with Spack
- Base containers that can be customized with e4s-alc
- Replace MPI in containerized E4S application with system MPI using e4s-cl
- What are we missing?

# Thank you

<https://www.exascaleproject.org>

*This research was supported by the Exascale Computing Project (17-SC-20-SC), a joint project of the U.S. Department of Energy's Office of Science and National Nuclear Security Administration, responsible for delivering a capable exascale ecosystem, including software, applications, and hardware technology, to support the nation's exascale computing imperative.*

EXASCALE COMPUTING PROJECT

**Thank you** to all collaborators in the ECP and broader computational science communities. The work discussed in this presentation represents creative contributions of many people who are passionately working toward next-generation computational science.
